

## BIOTOUG USER GUIDE FOR CORN

**Prevention :** To protect plants and trees from fungal diseases (Fusarium, Rhizoctonia), apply Biotoug 15 days before planting by mixing it into the soil (1–2 kg/hectare in open fields). This method effectively prevents infection.

**Treatment :** Biotoug treats infected plants and trees and protects them from fungal diseases (Fusarium, Rhizoctonia) through two methods: irrigation or spraying.

| STAGE                  | TIMING<br>(DAYS AFTER PLANTING) | APPLICATION METHOD                                    | DOSAGE                                                  |
|------------------------|---------------------------------|-------------------------------------------------------|---------------------------------------------------------|
| GERMINATION            | 14 days                         | Seed treatment with Biotoug before sowing             | 8 to 10 g of biotoug in 50 ml of water for 1 kg of seed |
| VEGETATIVE GROWTH      | 60 days                         | Apply to soil every 4 weeks by irrigation or spraying | 2 kg / 400L                                             |
| FLOWERING AND FRUITING | 60 days until harvest           | Apply to soil every 4 weeks to maintain protection    | 2 kg / 400L                                             |
